Technical Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, PL/SQL, Bash, HTML/CSS
Testing: Playwright, Selenium, Cucumber (BDD), JUnit, pytest, JMeter, axe-core, Postman
Frameworks: React.js, Next.js, Node.js, Express.js, Flask, Tailwind
Tools/Cloud: AWS, Docker, Jenkins, Git, Maven, Oracle SQL, PostgreSQL, MySQL, Supabase, Jira
Practices: Test Strategy, Page Object Model, Performance & Accessibility Testing, CI/CD, Agile

Experience

Software Developer, Quality Engineer Mar 2024 – Present
Express Scripts Canada *Mississauga, ON*

- Introduced and architected a TypeScript Playwright framework replacing the legacy Selenium/Cucumber suite, with page objects, fixtures, and stable locators; cut code per test ∼**50%** and runtime **60%** (55 to 22 min)
- Embedded automated **axe-core** accessibility scans into every Playwright page test, enforcing **AODA** compliance across 100+ pages and surfacing **40+ violations** before release
- Built a Java test-data tool that seeds production-like environments with **1,000+ users** and linked pharmacy records while enforcing integrity constraints, reducing setup from **3–4 days to 30 minutes**
- Developed **JMeter** load tests for login and file-download flows, simulating up to **500 concurrent users** to establish sub-2 s response-time baselines and validate a **99.5%** download success rate under load
- Converted **75%** of manual regression in a Java BDD framework (Cucumber, Selenium), defining Gherkin acceptance scenarios with the business analyst; cut those cases from **6 hours to 55 minutes**
- Automated API and data validation across **50+ REST endpoints**, pairing REST assertions with Oracle SQL consistency checks; saved **4+ hours** of manual checks per release and caught **15+ data defects**
- Reviewed developer code for testability and edge-case risk and investigated production defects through Oracle data analysis, contributing to a **30%** drop in post-release defects over 10+ releases

Software Developer Intern May 2021 – Apr 2022
Hammond Power Solutions *Guelph, ON*

- Built SharePoint internal tools for 3 departments, including an issue-tracking system managing **100+ requests**
- Integrated custom SharePoint forms with Excel reporting, eliminating **80%** of manual data-entry errors
- Automated form validation and email notification workflows, cutting average request response time by **40%**

Projects

touchline.ai | *React, Express, PostgreSQL, Supabase, Render* Sep 2024 – Feb 2025

- Engineered a full-stack web platform for soccer coaches to manage players, sessions, injuries, and team analytics
- Developed **20+ REST APIs** with JWT-based authentication and role-based authorization using Express
- Designed normalized PostgreSQL schemas and migrations to support multi-tenant team and session data

AWS S3 Management Shell | *Python, Boto3, AWS S3* Jan 2023

- Constructed a Python CLI with 10+ commands for uploading, copying, deleting, listing, and syncing AWS S3 objects via Boto3, streamlining cloud file management from the terminal
- Abstracted SDK calls into reusable modules to simplify error handling across CLI workflows

UniSearch | *React, Flask, Python, Playwright, NGINX* Apr 2022

- Created a full-stack web application to search and compare **300+ university courses** across 2 institutions
- Automated course data collection using Playwright scrapers with structured JSON output for fast querying
- Deployed a Flask REST API and React frontend with **NGINX**

Education

University of Guelph Guelph, ON, Canada
Bachelor of Computing, Major in Software Engineering with a Minor in Business *Sep 2019 – May 2023*

- **Achievements:** Graduated with Distinction — Dean's Honours List
- **Relevant Courses:** Data Structures & Algorithms, Cloud Computing, Parallel Programming, Software System Development & Integration, Object Oriented Programming
