Summary

Software engineer with a test automation (**SDET**) background, building full-stack applications and automation frameworks in **TypeScript**, **Java**, and **Python**. Experienced with **Playwright**, **Selenium**, **React**, and **Node.js**.

Education

University of Guelph — Guelph, ON, Canada

Bachelor of Computing, Major in Software Engineering with a Minor in Business — *Sep 2019 – May 2023*

- **Achievements:** Graduated with Distinction — Dean's Honours List
- **Relevant Courses:** Cloud Computing, Parallel Programming, Software System Development & Integration

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C, SQL, HTML/CSS
Frameworks: React.js, Next.js, Node.js, Maven, JUnit, Tailwind, Playwright, Selenium, Cucumber
Tools/Cloud: AWS, Docker, Git, Postman, MySQL, PostgreSQL, Oracle SQL, Supabase, Jira, Confluence
Practices: Agile Development, RESTful API Design, CI/CD, SDET, Test Automation, OOP

Experience

Software Development Engineer in Test — Mar 2024 – Present

Express Scripts Canada — *Mississauga, ON*

- Architected and led a **Playwright** automation framework in **TypeScript**, designing for maintainability with a page-object model and reusable fixtures that cut code per test ∼**50%** and suite runtime **60%**
- Engineered a data provisioning tool to generate **1,000+ test users** mapped to linked pharmacy records, enforcing one-to-one integrity and dependency constraints for valid, production-like test data at scale
- Built and maintained a **Java** automation framework using **Selenium**, **JUnit**, **Cucumber/BDD**, and **Maven**, developing **25+ reusable components** that cut manual QA **75%**
- Automated API and data validation with REST assertions and **Oracle SQL** across **50+ endpoints**, ensuring consistency between services and databases
- Identified high-risk edge cases through code reviews with developers, reducing post-release defects by **30%** across **10+ release cycles**

Software Developer Intern — May 2021 – Apr 2022

Hammond Power Solutions — *Guelph, ON*

- Developed internal tools using **SharePoint**, supporting **3+ departments** and optimizing cross-team workflows
- Built a custom issue-tracking system managing **100+ internal requests**, streamlining intake and categorization
- Integrated custom **SharePoint forms** with Excel reporting, eliminating **80%** of manual entry errors
- Automated form validation and email notifications, cutting average request response time by **40%**

Projects

touchline.ai | *React, Express, PostgreSQL, Supabase, Render* — Sep 2024 – Feb 2025

- Engineered a full-stack SaaS platform for soccer coaches to manage players, sessions, injuries, and team analytics
- Developed **20+ REST APIs** with **JWT-based authentication** and role-based authorization using **Express**
- Designed normalized **PostgreSQL** schemas and migrations to support multi-tenant team and session data
- Integrated cloud storage via **Supabase** for secure media uploads and team asset management

AWS S3 Management Shell | *Python, Boto3, AWS S3* — Jan 2023

- Constructed a **Python** CLI for managing **AWS S3** file transfers, reducing manual cloud operations by **50%**
- Implemented **10+ commands** for uploading, copying, deleting, listing, and syncing S3 objects via **Boto3**
- Abstracted complex SDK calls into reusable modules to simplify error handling and harden CLI workflows

UniSearch | *React, Flask, Python, Playwright, NGINX* — Apr 2022

- Created a full-stack web application to search and compare **300+ university courses** across **2 institutions**
- Automated course data collection using **Playwright** scrapers with structured **JSON** output for fast querying
- Deployed a **Flask** REST API and **React** frontend behind **NGINX** for scalable request handling

GPX Parser Website | *C, Node.js, Express, MySQL, JQuery* — May 2021

- Built a web app to parse GPX files using a native **C-based parser**, handling **thousands of track points**
- Supported persistent storage of **hundreds of GPS routes** using a **Node.js**, **Express**, and **MySQL** backend
- Introduced asynchronous UI updates using **jQuery/AJAX** with responsive layouts via **Bootstrap**
